

ABSTRACT OF THE DISCLOSURE

A method and apparatus for selecting attachments. When a sender indicates in an e-mail application or applet that an attachment is to be 5 associated with an e-mail message, an attachment chooser window is presented. The attachment chooser window provides a browser-based graphical user interface (GUI) which allows a sender to browse data resources, such as HTML documents and associated links. An attachment mechanism is provided by which a sender can choose a currently displayed data resource for 10 attachment in an e-mail message. In one embodiment, the attachment mechanism allows a user to select whether the attachment is retrieved and attached to an e-mail message as a resource locator (such as a URL) of the chosen data resource, or whether source data of the data resource is retrieved and attached to the e-mail message as one or more source files.
